1. Introduction

ERPNext is a free, open-source ERP (Enterprise Resource Planning) system that runs in a web browser. It is built on the **Frappe Framework** and stores its data in MariaDB (or PostgreSQL). One system replaces separate tools for sales, purchasing, inventory, accounting, manufacturing, HR, projects and support.

How to read this document. Chapter 2 explains the screen layout. Chapter 3 lists every common button. Chapter 4 explains how to prepare the system (setup and master data). Chapters 5 to 13 contain step-by-step **use cases** for every module. Chapters 14 onward cover accounting entries, reports, troubleshooting and checklists.

1.1 Modules

Module	Main documents
Accounting	Chart of Accounts, Journal Entry, Sales/Purchase Invoice, Payment Entry, Bank Reconciliation, Taxes, Budgets, Financial Reports
Selling	Quotation, Sales Order, Customer, Pricing Rule, POS
Buying	Supplier, Material Request, Request for Quotation, Purchase Order
Stock	Item, Warehouse, Stock Entry, Delivery Note, Purchase Receipt, Batch, Serial No, Reconciliation
Manufacturing	BOM, Work Order, Job Card, Production Plan, Workstation
HR and Payroll	Employee, Attendance, Leave, Expense Claim, Salary Structure, Payroll Entry (HRMS app)
Projects	Project, Task, Timesheet, Activity Cost
CRM	Lead, Opportunity, Campaign, Prospect
Assets	Asset, Depreciation, Asset Maintenance, Asset Movement
Support	Issue, Service Level Agreement, Warranty Claim, Maintenance Visit
Website / Portal	Web pages, Blog, Web Forms, Customer portal, Shopping cart
Setup / Settings	Users, Roles, Permissions, Workflow, Notification, Print Format, Customize Form, Email Account

1.2 Typical document flows

Area	Flow
Selling	Lead > Opportunity > Quotation > Sales Order > Delivery Note > Sales Invoice > Payment Entry
Buying	Material Request > Request for Quotation > Supplier Quotation > Purchase Order > Purchase Receipt > Purchase Invoice > Payment Entry
Manufacturing	Sales Order / Production Plan > BOM > Work Order > Material Transfer > Job Card > Manufacture (Finished Goods)
HR	Employee > Attendance / Leave > Salary Structure Assignment > Payroll Entry > Salary Slip > Bank Entry
Projects	Project > Task > Timesheet > Sales Invoice
Assets	Purchase Invoice (Asset item) > Asset > Depreciation Schedule > Journal Entry (Depreciation) > Scrap / Sale
Support	Issue > Assignment > Resolution > Warranty Claim / Maintenance Visit

1.3 Core concepts

- **DocType**: the blueprint of a document type. Every form, list and report in ERPNext is a DocType.
- **Draft, Submitted, Cancelled**: only submitted documents post to stock and accounting. Submitted documents cannot be edited; use Cancel and Amend.

- **Master vs Transaction**: masters (Item, Customer) are reference data; transactions (Sales Invoice) are dated events.
- **Roles and Permissions**: what a user sees and can do depends on roles and user permissions.
- **Linked documents**: use the **Create** button to move to the next document so data and links are preserved.

1.4 Glossary

Term	Meaning
Bench	CLI tool and folder that manages Frappe sites and apps
Site	One ERPNext instance with its own database
Desk	The administrator/employee web interface
DocType	Definition of a data model (fields, permissions, behaviour)
Document / Record	One saved instance of a DocType, e.g. one invoice
Master	Reference data such as Item, Customer, Supplier, Warehouse
Transaction	A dated document such as Sales Invoice or Stock Entry
Draft / Submitted / Cancelled	docstatus 0 / 1 / 2. Only submitted documents post to ledgers
Amend	Create a corrected copy of a cancelled document
Naming Series	Pattern used to number documents, e.g. SINV-.YYYY.-.#####
Fiscal Year	Accounting year used for reports and closing
Cost Center	Unit (department, branch, project) used to track income and expense
UOM	Unit of Measure (Nos, Kg, Box ...)
Fixture	Configuration exported with a custom app
Workflow	Approval process with states and transitions

2. Getting Started and the Screen Layout

2.1 Logging in

- Open your ERPNext URL, enter **Email/Username** and **Password**, click **Login**.
- Use **Forgot Password?** to receive a reset link. Optional logins: email link, Google, Office 365.
- A new site starts the **Setup Wizard** (language, country, currency, company, chart of accounts, fiscal year). Use **Next / Previous** and **Complete Setup**.

2.2 The Desk

Area	What it contains
Top bar: Search (Awesomebar)	Search records, open lists/reports, run quick commands. Shortcut Ctrl+G.
Top bar: Help	Documentation, user forum, shortcuts, report issue, About.
Top bar: Notification bell	Mentions, assignments, shares, alerts. Mark all as read; settings gear.
Top bar: Avatar menu	My Settings, Session Defaults, Reload, View Website, Toggle Full Width, Toggle Theme, Log out.
Left sidebar	Workspaces: Home, Accounting, Buying, Selling, Stock, Manufacturing, HR, Projects, CRM, Assets, Support, Settings.
Workspace page	Shortcuts, number cards, charts and link cards. Use Edit to customise, then Save.

2.3 Using the Awesomebar

- Type a document ID (e.g. `SINV-2025-00012`) to open it.
- Type a DocType name and choose the **List** or **New** option (e.g. `New Customer`).
- Type `report` plus a name (e.g. `report sales register`) to open a report.
- Type a calculation like `12*4.5` to use it as a calculator.

2.4 Keyboard shortcuts

Shortcut	Action
Ctrl+G	Focus the search bar (Awesomebar)
Ctrl+S	Save
Ctrl+Enter	Submit
Ctrl+B	New record of the current type
Ctrl+J	Jump to field
Ctrl+P	Print
Ctrl+Z / Ctrl+Y	Undo / Redo
Esc	Close dialog

Shortcuts vary by browser and version; see Help > Keyboard Shortcuts.

2.5 Session defaults

Avatar menu > **Session Defaults** lets you choose the default **Company** and **Fiscal Year** that pre-fill new documents. Click **Set Defaults**.

3. Buttons and Controls Reference

Button names can vary slightly by version, role and document status. If a button is missing, check permissions and whether the document is Draft, Submitted or Cancelled.

3.1 List view: top and toolbar

Button	Function
+ Add [DocType]	Opens a new form (a quick-entry popup may appear first; use Edit in Full Page for all fields)
Menu (three dots)	Import, Export, Print, User Permissions, Role Permissions Manager, Customize, Toggle Sidebar, Reload List, Settings
View switcher	Switch List / Report / Dashboard / Kanban / Calendar / Gantt / Image / Map views
Refresh	Reloads the list data
Filter	Opens the filter panel: Field + Condition + Value; combine several filters
Save Filter	Stores the current filters as a reusable preset with a name
Sort selector	Choose the sort field and toggle ascending / descending
Actions (after selecting rows)	Edit, Export, Assign To, Apply Assignment Rule, Add Tags, Print, Delete, Submit, Cancel

3.2 Form view: header buttons

Button	Function
Save (Ctrl+S)	Stores the document as Draft
Submit (Ctrl+Enter)	Finalises the document; posts to stock/accounting ledgers. Confirmation popup appears
Cancel	Reverses a submitted document (linked documents must be cancelled first)
Amend	Creates a corrected draft copy of a cancelled document (suffix -1, -2 ...)
Create (dropdown)	Creates the next document in the chain (e.g. Sales Order > Delivery Note, Sales Invoice, Work Order)
Get Items From (dropdown)	Pulls item rows from Quotation, Sales Order, BOM, Material Request, etc.
View (dropdown)	Opens Stock Ledger, Accounting Ledger, linked reports
Status (dropdown)	Hold, Close, Re-open, Resume, Lost, etc.
Tools (dropdown)	Payment Request, Update Stock, Fetch Timesheet and other helpers
Update Items / Edit	Change allowed fields on a submitted document (e.g. Sales Order quantities)
Print icon	Opens print preview and PDF
Previous / Next arrows	Move to the neighbouring record

3.3 Form menu (three dots)

Item	Function
Undo / Redo	Reverse or redo edits before saving
Copy to Clipboard	Copies the document data
Reload	Reloads the form and discards unsaved changes
Duplicate	Copies the document into a new draft
Rename	Changes the document ID where permitted
Delete	Removes a draft
Email	Opens the email dialog with optional print attachment
Links	Shows all linked documents
Jump to Field	Searches fields and scrolls to the chosen one
Remind Me	Sets a reminder for the document
Customize	Opens Customize Form (System Manager)
Repeat (Auto Repeat)	Creates a recurring copy on a schedule

3.4 Child table (item rows)

Button	Function
Add Row	Adds a blank row at the bottom
Add Multiple	Pick several items at once
Row checkbox + Delete	Removes selected rows
Row checkbox + Duplicate	Copies selected rows
Row edit icon	Opens the row form with every field (warehouse, batch, serial, discount)
Insert Above / Below, Move Up / Down	Positions rows
Download / Upload	Exports and re-imports the table in Excel/CSV
Scan Barcode	Adds an item by scanning or typing its barcode

3.5 Form sidebar and timeline

Element	Function
Assigned To	Assign users; creates a ToDo and notification
Attachments	Upload or link files; lock icon makes a file private
Share	Give a user Read / Write / Share / Submit access to this record
Tags	Label records for filtering
Comments box (timeline)	Add comments, mention users with @, attach files

3.6 Document states

Status	What you can do
Draft (docstatus 0)	Edit freely, Save, Delete, Submit
Submitted (docstatus 1)	Read-only. Cancel, Print, Email, Create linked documents, Update allowed fields
Cancelled (docstatus 2)	Read-only. Amend or Delete (if allowed)

3.7 Standard save / submit / cancel procedure

1. Fill the form and press **Save** (Ctrl+S). The status shows Draft / Not Saved until saved.
2. Review, then press **Submit** and confirm **Yes** in the popup.
3. To correct a submitted document press **Cancel**, confirm, then **Amend**; edit the new draft and submit again.
4. If ERPNext lists linked documents, cancel those first (they must be reversed in the opposite order of creation).

4. Setup and Master Data

Prepare the following before entering transactions.

4.1 Company and accounts

Accounting > Company: set Abbreviation, Default Currency, Country, Chart of Accounts, default accounts (Receivable, Payable, Income, Expense, Stock), Cost Center and default Warehouse. In **Accounts Settings** set the freeze dates and controls.

4.2 Master data checklist

Master	Where	Key fields
Item Group, UOM, Brand	Stock	Tree of groups, units and conversions
Warehouse	Stock	Company, parent warehouse, account
Item	Stock > Item	Code, name, group, UOM, Maintain Stock, valuation/standard rate, batch/serial, reorder levels
Price List / Item Price	Selling / Buying	Selling and buying price per item and currency
Customer / Supplier	Selling / Buying	Group, territory, currency, payment terms, tax category, address and contact
Tax templates	Accounting	Sales/Purchase Taxes and Charges Template, Item Tax Template, Tax Rule
Payment Terms / Mode of Payment	Accounting	Due dates and default cash/bank accounts
Cost Center	Accounting	Tree per company for tracking income and expense
Employee, Department, Designation, Holiday List	HR	Personal and job details, working calendar
Bank Account	Accounting	Linked GL account for reconciliation

4.3 Users and roles

- **Users > User > + Add User**: enter email, first name, tick roles (Sales User, Sales Manager, Accounts User, Accounts Manager, Stock User, Stock Manager, Purchase User, HR User, System Manager).
- **Role Permissions Manager**: per DocType tick Read, Write, Create, Delete, Submit, Cancel, Amend, Report, Import, Export, Print, Email, Share.
- **User Permissions**: restrict a user to specific Company, Warehouse, Customer, etc.

Tip: Create master data once, correctly. Most later errors come from wrong item settings (Maintain Stock, UOM, default accounts) or missing tax templates.

5. Use Cases: Selling

UC-S1 Standard sales cycle (Quotation to Payment)

Actor	Sales User, Stock User, Accounts User
Goal	Sell goods to a customer, deliver them, invoice and collect payment.
Prerequisites	Customer, Items (with stock), Price List, Warehouse and Tax Template exist.

Steps

1. Open **Selling > Quotation > + Add Quotation**. Select the **Customer**, add Items and Quantities, choose the Taxes template. **Save** then **Submit**.
2. When the customer accepts, click **Create > Sales Order** from the Quotation. Set **Delivery Date**, check Items, **Save** and **Submit**.
3. When goods leave the warehouse, in the Sales Order click **Create > Delivery Note**. Confirm quantities and warehouse, **Save** and **Submit** (stock decreases).
4. From the Delivery Note click **Create > Sales Invoice**. Check dates and taxes, **Save** and **Submit** (receivable is posted).
5. When the customer pays, click **Create > Payment** on the invoice. Choose Mode of Payment, enter Reference No/Date, **Save** and **Submit**.
6. The invoice status changes to **Paid**. Check **Accounts Receivable** report to confirm zero balance.

Result: Stock reduced, revenue and tax recorded, cash/bank increased, customer balance cleared.

Tip: Always use the **Create** button so quantities and rates flow automatically and the chain of documents stays linked.

UC-S2 Quotation revised or lost

Actor	Sales User
Goal	Handle a customer who asks for changes or rejects the offer.
Prerequisites	A submitted Quotation exists.

Steps

1. To revise: open the submitted Quotation, click **Cancel**, then **Amend**. Edit rates/items and submit again (new version -1).
2. Alternatively **Duplicate** the quotation (menu) to keep the old one and create a fresh draft.
3. If the customer declines: open the Quotation, **Status > Lost** (or **Set as Lost**), choose the **Lost Reason** and **Competitor**, then confirm.
4. Use the **Lost Reasons Detail** report to analyse why quotes are lost.

Result: Quotation status becomes Lost/Expired and no Sales Order can be created from it.

Tip: Set **Valid Till** so old quotes expire automatically.

UC-S3 Sale with advance payment

Actor	Accounts User
Goal	Receive money before delivery and later adjust it to the invoice.
Prerequisites	A submitted Sales Order.

Steps

1. Open the Sales Order and click **Create > Payment** (or **Payment Request** to email a link).
2. In Payment Entry the reference is the Sales Order. Enter amount and **Submit**. The advance is recorded against the customer.
3. Later create Delivery Note and Sales Invoice as usual.
4. In the invoice, the **Advances** section (button **Get Advances Received**) lists the earlier payment. Allocate and **Submit**; the balance due is reduced.

Result: Advance recorded as customer credit and adjusted against the final invoice.

Tip: If the advance is not adjusted automatically, tick **Allocate Advances Automatically (FIFO)** in the invoice.

UC-S4 Partial delivery and partial billing

Actor	Sales User, Stock User
Goal	Deliver and invoice an order in several shipments.
Prerequisites	Submitted Sales Order with several items or large quantities.

Steps

1. On the Sales Order click **Create > Delivery Note**. Reduce the **Qty** on rows to what is being shipped now. **Submit**.
2. The Sales Order status becomes **To Deliver and Bill** and % Delivered updates.
3. Repeat for the next shipment: create another Delivery Note; only the undelivered balance is proposed.
4. Create Sales Invoices from each Delivery Note (billing per delivery) or from the Sales Order (billing per item/percentage).
5. Order status turns **Completed** when 100% delivered and billed.

Result: Order fulfilment is tracked per shipment with correct stock and revenue postings.

Tip: Use the **Pending Delivery** style reports and Sales Order list filters (Status = To Deliver) for follow-up.

UC-S5 Sales return and credit note

Actor	Sales User, Accounts User
Goal	Customer returns goods or receives a price correction.
Prerequisites	A submitted Delivery Note and/or Sales Invoice.

Steps

1. Open the original **Sales Invoice** (or Delivery Note) and click **Create > Return / Credit Note** (Delivery Note: **Sales Return**).
2. Reduce quantities/amounts (values are negative). Tick **Update Stock** on the return invoice if goods come back into stock.
3. **Save** and **Submit**. The credit note references the original invoice.
4. Refund the customer with a **Payment Entry** (Payment Type = Pay) or leave the credit to offset future invoices.

Result: Revenue and tax reversed, stock restored, customer balance reduced.

Tip: For price-only corrections create a credit note with amounts only and untick Update Stock.

UC-S6 Retail sale with Point of Sale (POS)

Actor	Cashier
Goal	Sell quickly at a counter and take payment immediately.
Prerequisites	POS Profile configured (warehouse, price list, payment methods, users). POS Opening Entry created.

Steps

1. Open **Point of Sale**. If asked, complete **POS Opening Entry** (starting cash) and **Submit**.
2. Select a **Customer** (or use walk-in). Click items or scan barcodes to add to the cart; change qty with the +/- keys.
3. Click **Checkout**, choose the Payment Mode (Cash, Card, ...) and enter the amount tendered.
4. Click **Complete Order**. A POS Invoice is created and can be printed or emailed.
5. At the end of the shift create **POS Closing Entry**, verify expected vs actual cash, and **Submit**. Invoices are merged into Sales Invoices.

Result: Immediate sale with stock deduction, payment and daily cash reconciliation.

Tip: Enable offline support and barcode scanners for busy stores.

UC-S7 Automatic discounts with Pricing Rules

Actor	Sales Manager
Goal	Apply quantity, customer-group or promotional discounts without manual entry.
Prerequisites	Items and customers exist.

Steps

1. Open **Selling > Pricing Rule > + Add**. Choose **Apply On** (Item Code, Item Group, Brand).
2. Select **Applicable For** (Customer, Customer Group, Territory, Campaign).
3. Set min/max **Quantity** or **Amount**, then **Rate or Discount** (Discount Percentage, Discount Amount or Rate).
4. Set **Valid From / Valid Upto** dates and priority. **Save**.
5. Create a Quotation/Sales Order/Invoice matching the conditions; the discount appears automatically on the item row.

Result: Consistent, rule-based pricing.

Tip: Use **Promotional Scheme** for buy-X-get-Y offers and **Coupon Code** for coupons.

UC-S8 Recurring (subscription) invoices

Actor	Accounts User
Goal	Bill the same customer monthly without re-entering the invoice.
Prerequisites	A submitted Sales Invoice to copy.

Steps

1. Open the Sales Invoice. From the menu choose **Repeat** (Auto Repeat).
2. Set **Frequency** (Daily, Weekly, Monthly, Quarterly, Yearly), **Start Date** and **End Date**, optional **Notify by Email**.
3. **Save**. The system creates new draft/submitted copies on schedule.

4. Monitor from **Auto Repeat** list; use **Pause/Disable** to stop.

Result: Automated periodic billing.

Tip: For plan-based billing with proration use the **Subscription** and **Subscription Plan** doctypes.

UC-S9 Sale in a foreign currency

Actor	Sales User, Accountant
Goal	Invoice a customer in USD/EUR while books are in local currency.
Prerequisites	Exchange rates available (Currency Exchange) and customer currency set.

Steps

1. Set the customer's **Default Currency**, or choose the **Currency** in the Sales Order/Invoice header.
2. The **Exchange Rate** auto-fills; edit if required. Amounts show in both currencies.
3. Create the **Payment Entry** in the same currency; adjust rate to the actual bank rate.
4. Post the difference with **Exchange Gain/Loss** (automatic on reconciliation) and review it in the General Ledger.

Result: Multi-currency sales with correct gain/loss accounting.

Tip: Enable automatic fetching of rates in **Currency Exchange Settings**.

6. Use Cases: Buying

UC-B1 Standard purchase cycle

Actor	Purchase User, Stock User, Accounts User
Goal	Buy goods from a supplier, receive them and pay the bill.
Prerequisites	Supplier, Items and Warehouse exist.

Steps

1. Create **Buying > Purchase Order > + Add**. Select the **Supplier**, **Required By** date, Items, Quantities and Rates. **Save** and **Submit**.
2. When goods arrive click **Create > Purchase Receipt**. Verify quantities, accepted/rejected warehouses, batch/serial. **Submit** (stock increases).
3. When the supplier bill arrives click **Create > Purchase Invoice** from the receipt. Enter **Bill No** and **Bill Date**. **Submit**.
4. Pay from **Create > Payment** on the invoice: choose Mode of Payment, **Submit**.
5. Order status turns **Completed** when received and billed.

Result: Stock increased, liability recorded, payment posted and supplier balance cleared.

Tip: Use **Payment Terms** on the supplier to compute due dates automatically.

UC-B2 Compare suppliers with Request for Quotation

Actor	Purchase Manager
Goal	Get several quotes and choose the best.
Prerequisites	Suppliers with email addresses; Material Request (optional).

Steps

1. Open a submitted **Material Request** and click **Create > Request for Quotation** (or create RFQ manually).
2. Add the **Suppliers** and click **Send Emails to Suppliers**. Suppliers can reply through the portal.
3. Record replies via **Create > Supplier Quotation** (or from the supplier portal).
4. Open **Supplier Quotation Comparison** report to compare prices.
5. From the chosen Supplier Quotation click **Create > Purchase Order**.

Result: Documented price comparison and a Purchase Order at the best rate.

Tip: Set up **Supplier Scorecard** to rate suppliers over time.

UC-B3 Return goods to a supplier (debit note)

Actor	Purchase User, Accounts User
Goal	Send back defective goods and reduce the bill.
Prerequisites	A submitted Purchase Receipt and/or Purchase Invoice.

Steps

1. Open the **Purchase Receipt** and click **Create > Purchase Return** (stock leaves the warehouse).

2. Edit quantities to be returned, **Submit**.
3. Open the **Purchase Invoice** and click **Create > Return / Debit Note** to reduce the liability.
4. **Submit**. Either offset against the next payment or receive a refund via **Payment Entry** (Receive).

Result: Stock and payable both corrected.

Tip: Use a Rejected Warehouse when the goods fail inspection instead of returning immediately.

UC-B4 Add freight and duties (Landed Cost)

Actor	Accounts / Purchase User
Goal	Include shipping and customs in the item cost.
Prerequisites	Submitted Purchase Receipt(s) and the freight/duty Purchase Invoices.

Steps

1. Open **Stock > Landed Cost Voucher > + Add**.
2. In **Purchase Receipts** add the receipts affected (or use **Get Items From Purchase Receipts**).
3. In **Taxes and Charges** add each cost with its expense account and amount.
4. Choose **Distribute Charges Based On** (Qty, Amount or Distribute Manually) and **Submit**.
5. Item valuation rates are updated and the ledgers reflect the extra cost.

Result: Accurate inventory valuation and cost of goods sold.

Tip: Check the Stock Ledger report for the revised valuation rate.

UC-B5 Automatic reorder of stock

Actor	Stock Manager
Goal	Create purchase requests when stock falls below a level.
Prerequisites	Items with **Maintain Stock** enabled.

Steps

1. Open the **Item**. In the **Reorder** (Auto Re-order) table add a row: **Warehouse**, **Reorder Level**, **Reorder Qty**, **Material Request Type** = Purchase.
2. Enable **Auto Create Material Request** in **Stock Settings** and Save.
3. The daily scheduler creates a **Material Request** when projected quantity is below the level and notifies by email.
4. Buyer converts it: **Create > Request for Quotation** or **Purchase Order**.

Result: Stock-outs are prevented without manual monitoring.

Tip: Review the **Stock Projected Qty** report to fine-tune levels.

7. Use Cases: Stock and Inventory

UC-ST1 Enter opening stock

Actor	Stock Manager
Goal	Load initial inventory when starting ERPNext.
Prerequisites	Items, Warehouses and an Opening Stock (temporary) account exist.

Steps

1. Open **Stock > Stock Reconciliation > + Add**. Set **Purpose = Opening Stock**.
2. Click **Get Items** or **Download Template**, fill **Item Code, Warehouse, Qty, Valuation Rate** and upload.
3. Confirm the **Difference Account** (Temporary Opening).
4. **Save** and **Submit**.
5. Verify with **Stock Balance** report.

Result: Warehouses have starting quantities and values.

Tip: Use one Stock Reconciliation per warehouse for easier review.

UC-ST2 Transfer stock between warehouses

Actor	Stock User
Goal	Move goods from one warehouse or branch to another.
Prerequisites	Two warehouses; stock in the source.

Steps

1. Create **Stock > Stock Entry**. Choose **Stock Entry Type = Material Transfer**.
2. Set **Source Warehouse** and **Target Warehouse**. Add items and quantities (or **Get Items From > Material Request**).
3. **Save** and **Submit**. Both warehouses update.

Result: Inventory moved with a full audit trail.

Tip: For transit tracking use **Material Transfer** with **Add to Transit** to an in-transit warehouse.

UC-ST3 Physical stock count and correction

Actor	Stock Manager
Goal	Match system stock with the real count.
Prerequisites	Count sheet available.

Steps

1. Open **Stock Reconciliation** and set **Purpose = Stock Reconciliation**.
2. Click **Get Items** for a warehouse/item group and enter the **Actual Quantity** counted.
3. Check the difference value and account, **Save** and **Submit**.
4. Stock and the profit and loss (stock adjustment) are updated.

Result: System stock equals physical stock.

Tip: Perform counts by cycle (a few items each week) using Item Group filters.

UC-ST4 Track batches and serial numbers

Actor	Stock User
Goal	Trace expiry dates or individual units.
Prerequisites	Item flagged **Has Batch No** and/or **Has Serial No**.

Steps

1. Open the **Item > Inventory** tab and tick **Has Batch No** (and **Create New Batch Automatically** / **Has Expiry Date**) or **Has Serial No**.
2. On Purchase Receipt or Stock Entry, use the row's **Add Serial / Batch No** button (or scan) to enter numbers.
3. On Delivery Note, ERPNext proposes batches using FEFO/FIFO; adjust if needed.
4. Use **Batch-wise Balance History**, **Serial No Ledger** or the Warranty status for tracing.

Result: Full traceability from supplier to customer.

Tip: Turn on **Auto Create Serial No and Batch Bundle for Outward** in Stock Settings (v15) to speed up entry.

UC-ST5 Items with variants (size, colour)

Actor	Stock Manager
Goal	Manage one product in many variants.
Prerequisites	Item Attributes defined (e.g. Size: S, M, L).

Steps

1. Create the **Item Attribute** records (**Stock > Item Attribute**) with values.
2. Create a template **Item** and tick **Has Variants**. Add the attributes in the **Variants** table.
3. **Save**, then click **Create > Multiple Variants**, tick values, and **Create Variants**.
4. Each variant has its own code (e.g. TSHIRT-RED-M) and stock; the template cannot be used in transactions.

Result: Clean catalogue with stock per variant.

Tip: Set prices via Item Price for each variant or use Pricing Rules on the template.

UC-ST6 Write off damaged or expired stock

Actor	Stock Manager
Goal	Remove goods that are no longer usable.
Prerequisites	Stock exists in a warehouse; an expense account for write-offs.

Steps

1. Create **Stock Entry** with **Type = Material Issue**.
2. Select the **Source Warehouse**, add items and quantities, choose the **Expense Account (Difference Account)** such as Stock Adjustment/Write-off.
3. Add a **Remark** with the reason and **Submit**.

Result: Stock reduced and loss recorded in the ledger.

Tip: Attach photos or approval documents through the sidebar Attachments.

8. Use Cases: Accounting

UC-A1 Record a business expense

Actor	Accountant
Goal	Book an expense (rent, utilities) and pay it.
Prerequisites	Expense accounts and a Bank/Cash account exist.

Steps

1. Option 1 (bill first): create a **Purchase Invoice** for the supplier with a non-stock **Expense Account** row; then pay with **Payment Entry**.
2. Option 2 (direct payment): open **Journal Entry**, set **Entry Type = Bank Entry**.
3. Row 1: Account = Rent Expense, **Debit** = amount, Cost Center. Row 2: Account = Bank, **Credit** = amount.
4. Enter **Cheque/Reference No and Date**. **Save** and **Submit**.

Result: Expense in profit and loss, cash/bank reduced.

Tip: Use **Cost Center** and **Accounting Dimensions** to split expenses by branch or department.

UC-A2 Receive one payment for many invoices

Actor	Accounts User
Goal	Allocate a single customer payment across several invoices.
Prerequisites	Several submitted unpaid invoices for the customer.

Steps

1. Open **Payment Entry > + Add**. **Payment Type = Receive**, Party Type = Customer, choose the customer.
2. Enter the **Paid Amount**. Click **Get Outstanding Invoice** to list open invoices.
3. Adjust **Allocated** amounts per invoice (oldest first). Remaining amount is unallocated or an advance.
4. Enter reference details and **Submit**.

Result: All selected invoices reduced or closed.

Tip: Use the **Payment Reconciliation** tool to match unallocated payments later.

UC-A3 Bank reconciliation

Actor	Accountant
Goal	Match bank statement lines with ERPNext entries.
Prerequisites	Bank Account linked to a ledger account.

Steps

1. Go to **Accounting > Bank Statement Import** (or **Bank Transaction**) and upload the CSV/Excel statement.
2. Open **Bank Reconciliation Tool**, choose **Company** and **Bank Account**, click **Get Unreconciled Entries**.
3. Select a bank line; matching Payment Entries or Journal Entries are suggested. Tick them and click **Reconcile**.
4. For lines without a document (fees, interest) use **Create Voucher** to make a Payment/Journal Entry.

5. Review **Bank Reconciliation Statement** report for zero difference.

Result: Books agree with the bank.

Tip: Define **Bank Rules** to auto-match recurring transactions.

UC-A4 Set up sales and purchase taxes (VAT/GST)

Actor	Accountant
Goal	Charge and claim taxes automatically.
Prerequisites	Tax accounts (Output Tax, Input Tax) in the Chart of Accounts.

Steps

1. Create **Sales Taxes and Charges Template** with a row: Type = On Net Total, Account Head = Output VAT, Rate = your tax rate.
2. Create the mirror **Purchase Taxes and Charges Template** using the Input VAT account.
3. Set default templates on the Company or on Customer/Supplier; use **Tax Rule** for conditions (state, group).
4. New invoices load the template automatically. Use **Item Tax Template** for items with different rates or exemptions.
5. File returns using **VAT/GST Detailed** reports (Sales Register, Purchase Register, Tax Withholding reports).

Result: Correct taxes on every document and ready-made reports for filing.

Tip: Use **Inclusive** tax option (Included in Print Rate) when prices already contain tax.

UC-A5 Budget control

Actor	Finance Manager
Goal	Warn or stop spending above budget.
Prerequisites	Cost centers and expense accounts.

Steps

1. Open **Accounting > Budget > + Add**.
2. Select **Budget Against** (Cost Center or Project) and the Fiscal Year.
3. Add expense **Accounts** with annual amounts (monthly distribution optional).
4. Set actions for exceeding: **Stop, Warn or Ignore** for Annual and Monthly budget.
5. **Submit**. Any Purchase Order, Material Request or Expense that exceeds the budget triggers the action.
6. Track with the **Budget Variance Report**.

Result: Spending is controlled at document entry.

Tip: Enable checks for Actual Expense and for Purchase Order/Material Request separately.

UC-A6 Petty cash

Actor	Cashier / Accountant
Goal	Track small day-to-day cash spending.
Prerequisites	A Petty Cash account (type Cash).

Steps

1. Fund the box: Journal Entry with Debit = Petty Cash, Credit = Bank.
2. For each spend create a **Journal Entry** (Cash Entry): Debit = expense account, Credit = Petty Cash; attach the receipt.
3. Run the **General Ledger** filtered on the Petty Cash account to see the balance.
4. Replenish with a new Bank to Petty Cash entry when low.

Result: Cash spending is documented with balance always visible.

Tip: Give each cashier an own account or Cost Center for accountability.

UC-A7 Month-end and year-end closing

Actor	Finance Manager
Goal	Close periods and produce statements.
Prerequisites	All transactions for the period entered and reconciled.

Steps

1. Reconcile bank and review **Accounts Receivable/Payable** ageing.
2. Post accrual, depreciation and adjustment **Journal Entries**.
3. Run **Trial Balance**, **Profit and Loss** and **Balance Sheet**; check for errors.
4. Optionally set **Accounts Frozen Upto** in Accounts Settings or create an **Accounting Period** to lock the month.
5. At year-end create **Period Closing Voucher**: choose the Fiscal Year, closing account (retained earnings) and **Submit**.

Result: Closed period, locked ledgers and final statements.

Tip: Back up the site before year-end closing.

9. Use Cases: Manufacturing

UC-M1 Produce a finished item from raw materials

Actor	Production Manager, Stock User
Goal	Manufacture goods using a Bill of Materials.
Prerequisites	Raw material items with stock; finished good item; Work-in-progress warehouse.

Steps

1. Create **Manufacturing > BOM**: choose the finished **Item**, quantity, add raw materials in **Items** (and optionally **Operations**). **Save** and **Submit**.
2. Create a **Work Order**: select Production Item, **BOM**, Qty and warehouses (Source, WIP, Target). **Save** and **Submit**.
3. Click **Start** to transfer materials (a Stock Entry of type Material Transfer for Manufacture). **Submit**.
4. If operations are used, operators update each **Job Card** with **Start Job**, **Complete Job** and time.
5. Click **Finish** to create the **Manufacture** Stock Entry. Enter produced quantity and **Submit**.
6. Raw materials are consumed and finished goods added to the target warehouse; the Work Order is **Completed**.

Result: Finished goods in stock with actual cost from materials and operations.

Tip: Use **Update Cost** in the BOM regularly to refresh rates.

UC-M2 Plan production from Sales Orders

Actor	Planner
Goal	Convert open orders into work orders and material requests.
Prerequisites	Submitted Sales Orders with BOM items.

Steps

1. Open **Production Plan > + Add**. Click **Get Sales Orders** (filter by date/customer).
2. Click **Get Items For Work Order** to list production items.
3. Click **Get Raw Materials for Production** to compute shortages.
4. **Save** and **Submit**. Use **Create > Work Order** and **Create > Material Request** buttons.
5. Track progress in **Production Planning Report** and **Work Order Summary**.

Result: Coordinated production and purchasing plan.

Tip: Tick **Include Non Stock Items** and **Consider Projected Qty** for a realistic plan.

10. Use Cases: HR and Payroll

UC-H1 Onboard a new employee

Actor	HR User
Goal	Create an employee with access to the system.
Prerequisites	Company, Department and Designation masters.

Steps

1. Open **HR > Employee > + Add**. Fill First Name, Gender, Date of Birth, **Date of Joining**, Company, Department, Designation.
2. Add contact, bank and emergency information.
3. In **Attendance and Leave** set Holiday List and Attendance Device ID if used.
4. Link a **User ID** (create the user with roles if the employee needs access) and **Save**.
5. Assign a **Salary Structure** via **Salary Structure Assignment** and leave via **Leave Allocation**.

Result: Complete employee record ready for attendance and payroll.

Tip: Use **Employee Onboarding Template** to track tasks such as laptop, email, contract.

UC-H2 Leave request and approval

Actor	Employee, Leave Approver
Goal	Apply for leave and get it approved.
Prerequisites	Leave Type, Leave Allocation and Leave Approver set on the employee.

Steps

1. Employee opens **Leave Application > + Add**: Leave Type, From/To dates, Reason.
2. **Save**. The status is *Open*; the approver is notified.
3. Approver opens the application, sets **Status = Approved** (or Rejected) and **Submit**.
4. Attendance is marked automatically as On Leave and balances are reduced.

Result: Leave recorded and balance updated.

Tip: Enable a **Workflow** if multi-level approvals are needed.

UC-H3 Monthly payroll

Actor	HR Manager, Accountant
Goal	Generate, approve and pay salaries.
Prerequisites	Salary Components, Salary Structures, Assignments, attendance for the month.

Steps

1. Open **Payroll Entry > + Add**. Choose Company, **Posting Date**, **Payroll Frequency** and dates.
2. Click **Get Employees**, review the list and **Save**, **Submit**.
3. Click **Create Salary Slips**, then **Submit Salary Slips** after reviewing sample slips.
4. Click **Make Bank Entry** to create the payment Journal Entry and **Submit** after payment.

5. Employees can view their **Salary Slip** in the portal or by email.

Result: Salary expense and liabilities posted and employees paid.

Tip: Configure **Payroll Settings** for email of salary slips and taxes.

UC-H4 Employee expense claim

Actor	Employee, Approver, Accountant
Goal	Reimburse costs paid by employees.
Prerequisites	Expense Claim Types with accounts.

Steps

1. Employee creates **Expense Claim**: date, Expense Type, Amount, description; attach receipts.
2. **Save** and **Submit**. Approver sets status **Approved**.
3. Accountant clicks **Create > Payment** (or Journal Entry) to reimburse; or it is added to payroll.

Result: Reimbursement recorded and paid.

Tip: Use **Employee Advance** when money is given before the trip.

11. Use Cases: Projects and CRM and Support

UC-P1 Bill a project from timesheets

Actor	Project Manager, Employee, Accountant
Goal	Record hours and invoice the client.
Prerequisites	Customer, Project, Activity Types and billing rates (Activity Cost).

Steps

1. Create **Project** with Customer, dates and **Project Type** (External).
2. Add **Tasks** and assign them (status Open, Working, Completed).
3. Employees log hours in **Timesheet**: click **Start Timer** or add rows in **Time Logs** with Project, Task, Activity Type, hours and **Billable**. **Save** and **Submit**.
4. In the Timesheet click **Create > Sales Invoice** (or in the Sales Invoice use **Fetch Timesheet**).
5. Submit the invoice and collect payment as usual. Check **Project Summary** and **Timesheet Billing Summary**.

Result: Time-based revenue and project profitability analysis.

Tip: Use the **Kanban** or **Gantt** view of Tasks for planning.

UC-C1 Lead to customer

Actor	Sales User
Goal	Manage a prospect from first contact to customer.
Prerequisites	Lead Source and Sales Person defined.

Steps

1. Create **CRM > Lead**: name, email, phone, source. **Save** and assign to a sales person (sidebar).
2. Log calls and emails in the timeline (**New Email**, **Comment**); schedule follow-up with **Next Contact Date**.
3. When interested click **Create > Opportunity** and enter expected value and probability.
4. Click **Create > Quotation**. When accepted **Create > Customer** (on the Lead) converts the lead.
5. Continue with the sales cycle (UC-S1). Review results in **Sales Funnel** and **Lead Conversion Time** reports.

Result: Structured pipeline and traceable conversion.

Tip: Use **Email Campaign** to nurture leads automatically.

UC-C2 Customer support ticket (Issue) with SLA

Actor	Support Agent
Goal	Log, assign and resolve customer problems on time.
Prerequisites	Service Level Agreement and support email account configured.

Steps

1. Emails to the support address create **Issue** records automatically; or click **+ Add Issue** for phone calls.
2. Assign to an agent (sidebar) and set **Priority**. The SLA timers for response/resolution start.
3. Reply from the timeline (**New Email**) and set **Status = Replied / Resolved**.

4. Use **Create > Warranty Claim / Maintenance Visit / Task** if a visit is required.
5. Set **Status = Closed** or let it auto-close after the configured days. Review **Support Hour Distribution** and SLA reports.

Result: Tracked support with SLA compliance.

Tip: Create a **Holiday List** for SLA to skip non-working days.

12. Use Cases: Assets

UC-AS1 Buy and depreciate a fixed asset	
Actor	Accountant
Goal	Capitalise equipment and expense it over time.
Prerequisites	An Asset Category with depreciation and accounts; an Item with **Is Fixed Asset**.

Steps

1. Create **Purchase Invoice** for the asset item (or Purchase Receipt). **Submit**.
2. Open the **Asset** (created automatically or via **Create > Asset**). Set **Available For Use Date**, **Depreciation Method** (Straight Line, Double Declining, Written Down Value) and Total Number of Depreciations.
3. **Save** and **Submit**. The **Depreciation Schedule** table is filled.
4. Each period ERPNext creates a **Journal Entry** for depreciation automatically (or use **Post Depreciation Entry**).
5. When retiring: use **Scrap Asset** or **Sell Asset** buttons to post disposal gain/loss.

Result: Asset register and depreciation posted on schedule.

Tip: Use **Asset Maintenance** to schedule servicing and **Asset Movement** to transfer location.

13. Use Cases: Administration and Customisation

UC-X1 Add a user and control access

Actor	System Manager
Goal	Create a user with the right permissions.
Prerequisites	Roles already defined.

Steps

1. Open **Users > User > + Add User**. Enter email and first name; keep **Send Welcome Email** ticked.
2. In **Roles** tick required roles (e.g. Sales User, Stock User).
3. Add **User Permissions** (e.g. Company, Warehouse, Territory) to restrict which records the user sees.
4. Tune document rights with **Role Permissions Manager**.
5. Test with **Impersonate** (v15) or a private browser window.

Result: A user with limited, correct access.

Tip: Disable users who leave (untick Enabled) instead of deleting them.

UC-X2 Set up an approval workflow

Actor	System Manager
Goal	Require manager approval before a document is submitted.
Prerequisites	Document Type (e.g. Purchase Order) and roles exist.

Steps

1. Open **Workflow > + Add**. Enter name and **Document Type**; tick **Is Active**.
2. In **States** add: Draft (Doc Status 0), Pending Approval (0), Approved (1), Rejected (0) with the **Allow Edit** role.
3. In **Transitions** add: Draft > **Send for Approval** (Purchase User) > Pending Approval; Pending Approval > **Approve** (Purchase Manager) > Approved; Pending Approval > **Reject** (Purchase Manager) > Rejected.
4. Optional **Condition**, e.g. `doc.grand_total > 10000`. **Save**.
5. Open a Purchase Order: the normal Submit button is replaced by the workflow **Actions** dropdown.

Result: Controlled approval process with audit trail.

Tip: Add a **Notification** to email the approver when the state changes.

UC-X3 Bulk import items, customers or opening data

Actor	Data Entry / Admin
Goal	Load many records from Excel or CSV.
Prerequisites	Import file prepared.

Steps

1. Open **Data Import > + Add**. Choose **Document Type** and **Import Type = Insert New Records**.
2. Click **Download Template**, choose mandatory + needed fields, **Export Template**.
3. Fill the sheet (dates YYYY-MM-DD, link fields must match existing IDs).

4. Upload the file, review the **Preview** and click **Start Import**.
5. If errors occur click **Export Errored Rows**, correct and re-import.

Result: Hundreds of records loaded in minutes.

Tip: Use **Update Existing Records** to change fields such as prices in bulk.

UC-X4 Add a custom field and change the print layout

Actor	System Manager
Goal	Capture extra information and show it on printouts.
Prerequisites	System Manager role.

Steps

1. Open **Customize Form**, select the DocType (e.g. Sales Invoice).
2. In **Fields** click **Add Row**, set **Label**, **Type**, **Insert After** and options; **Update**.
3. Open **Print Format Builder**, choose the DocType and format, drag the new field into the layout and **Save**.
4. Or edit the **Letter Head** in **Letter Head** list to add company logo and footer.
5. Reload a document and check **Print Preview**.

Result: Tailored forms and professional documents without coding.

Tip: Custom fields are stored as fixtures if you later move to a custom app.

UC-X5 Automatic alerts and email notifications

Actor	System Manager
Goal	Notify people when something happens.
Prerequisites	Outgoing Email Account working.

Steps

1. Open **Notification > + Add**. Set **Document Type** and **Send Alert On** (New, Save, Submit, Value Change, Days Before/After, Custom).
2. Add **Recipients** (roles, fields or fixed emails) and an optional **Condition**.
3. Write the **Subject** and **Message** using Jinja fields such as `{{ doc.name }}` and `{{ doc.customer }}`.
4. **Save** and tick **Enabled**. Test with **Send Test**.

Result: Timely alerts such as overdue invoice reminders or low stock warnings.

Tip: For overdue payments also configure **Dunning** and **Email Digest**.

UC-X6 Backup and restore

Actor	Administrator
Goal	Protect data and recover from problems.
Prerequisites	Access to the server or System Manager for the UI options.

Steps

1. Backups run daily by default. Download from **Settings > Download Backups**.

2. On the server: `bench --site yoursite backup --with-files`.
3. Restore with `bench --site yoursite restore path/to/database.sql.gz --with-public-files x --with-private-files y`.
4. Then run `bench --site yoursite migrate` and `bench clear-cache`.
5. Test restore regularly on a staging site.

Result: Ability to recover data after failure or mistakes.

Tip: Copy backups off the server (S3/Dropbox) using **Backup Settings**.

UC-X7 Connect other systems through the REST API

Actor	Developer
Goal	Read or write ERPNext data from another application.
Prerequisites	API key and secret generated on the user.

Steps

1. Open the **User > API Access > Generate Keys** and copy the key and secret.
2. Call `GET /api/resource/Item?limit_page_length=5` with header `Authorization: token key:secret`.
3. Create data with `POST /api/resource/Customer` (JSON body).
4. Call custom methods with `/api/method/app.module.function`.
5. Use **Webhook** doctype to push events (e.g. on Sales Invoice submit) to another URL.

Result: Automated integration with websites, apps and BI tools.

Tip: Create a dedicated integration user with minimal roles.

14. What Each Transaction Posts (Accounting Effects)

Use this table to understand the accounting impact of each document. Stock-related postings assume **Perpetual Inventory** (default in recent versions). The accounts named are typical defaults from the standard chart.

Document	Debit	Credit
Sales Invoice (no stock update)	Debit: Debtors (Receivable)	Credit: Sales (Income), Output Tax
Delivery Note / Sales Invoice with Update Stock (perpetual inventory)	Debit: Cost of Goods Sold	Credit: Stock In Hand
Payment Entry - Receive	Debit: Bank / Cash	Credit: Debtors
Purchase Receipt (perpetual inventory)	Debit: Stock In Hand	Credit: Stock Received But Not Billed
Purchase Invoice (stock item, after receipt)	Debit: Stock Received But Not Billed, Input Tax	Credit: Creditors (Payable)
Purchase Invoice (expense item)	Debit: Expense Account, Input Tax	Credit: Creditors
Payment Entry - Pay	Debit: Creditors	Credit: Bank / Cash
Sales Return / Credit Note	Debit: Sales, Output Tax (and Stock In Hand)	Credit: Debtors (and COGS)
Purchase Return / Debit Note	Debit: Creditors	Credit: Stock Received But Not Billed / Expense, Input Tax
Stock Entry - Material Receipt	Debit: Stock In Hand	Credit: Stock Adjustment / Source account
Stock Entry - Material Issue (write off)	Debit: Stock Adjustment / Expense	Credit: Stock In Hand
Stock Reconciliation	Debit/Credit: Stock In Hand	Opposite: Stock Adjustment (difference account)
Asset depreciation	Debit: Depreciation Expense	Credit: Accumulated Depreciation
Salary Slip (payroll)	Debit: Salary Expense	Credit: Payroll Payable, Deductions Payable
Payroll bank entry	Debit: Payroll Payable	Credit: Bank
Expense Claim (approved)	Debit: Expense	Credit: Payable to Employee
Landed Cost Voucher	Debit: Stock In Hand	Credit: Expenses Included In Valuation

Tip: After submitting any document use **View > Accounting Ledger** (or Stock Ledger) in the header to see the exact entries created.

15. Reports Catalogue

Area	Reports
Accounting	General Ledger, Trial Balance, Balance Sheet, Profit and Loss Statement, Cash Flow, Accounts Receivable, Accounts Payable, Accounts Receivable Summary, Sales Register, Purchase Register, Budget Variance, Bank Reconciliation Statement, Trial Balance for Party
Selling	Sales Analytics, Sales Order Analysis, Customer Ledger Summary, Item-wise Sales Register, Territory-wise Sales, Quotation Trends, Pending SO Items for Purchase Request
Buying	Purchase Analytics, Purchase Order Analysis, Requested Items to Order, Supplier Quotation Comparison, Purchase Order Trends, Supplier Ledger Summary
Stock	Stock Balance, Stock Ledger, Stock Projected Qty, Stock Ageing, Item Shortage Report, Batch-wise Balance History, Warehouse-wise Stock Balance, Stock Summary
Manufacturing	Production Planning Report, Work Order Summary, BOM Stock Report, Production Analytics, Work Order Consumed Materials
HR	Monthly Attendance Sheet, Employee Leave Balance, Salary Register, Employee Birthday, Payroll Register, Employee Analytics
Projects	Project Summary, Timesheet Billing Summary, Delayed Tasks Summary, Daily Timesheet Summary
CRM / Support	Sales Funnel, Lead Details, Lead Conversion Time, Support Hours, Issue Summary, First Response Time for Issues

15.1 Working with reports

- Choose filters (Company, dates, party) and click **Refresh**.
- **Set Chart / Toggle Chart** displays bar/line/pie charts; **Pick Columns** hides or shows columns.
- Menu: **Export** (Excel/CSV), **Print / PDF**, **Save** custom report, **Add to Dashboard**.
- Report View inside any list lets you build quick reports with **Add Column, Group By, Sort**, totals and save.

15.2 Dashboards

Create **Dashboard Chart** and **Number Card** documents (Settings) and place them on a workspace using **Edit > Add Chart / Add Number Card**, then **Save**.

16. Printing, Email, Import and Export

16.1 Print and PDF

- Click the **Print** icon or menu > **Print** to open the preview.
- Choose **Print Format**, **Language**, **Letter Head**, **Page Size**, **Orientation**.
- Click **Print** or **PDF**. Use **Edit Format** to open the Print Format Builder.

16.2 Email a document

- Menu > **Email** (or timeline **New Email**). Fill To, CC, BCC, choose an **Email Template**.
- Tick **Attach Document Print** to send the PDF; **Send me a copy**; **Send Read Receipt**. Click **Send**.
- Configure outgoing/incoming mail in **Email Account** and test with **Test**.

16.3 Data Import

- **Data Import > + Add**: choose DocType and Insert or Update.
- **Download Template**, fill, upload, review **Preview**, **Start Import**; fix rows with **Export Errored Rows**.

16.4 Export

- List: select rows > **Actions > Export** (or menu > Export for all).
- Report or Report View: menu > **Export**, choose Excel or CSV.

17. Notifications, Assignments and User Settings

Feature	How to use
Assign	Sidebar > Assigned To > add user, due date, comment. Creates a ToDo and a notification.
ToDo	Home > To Do: add tasks, set priority/date, mark closed.
Mentions	Type @ in a comment to notify a user.
Reminder	Form menu > Remind Me: pick date/time and message.
Notification (system)	Settings > Notification: DocType, event, recipients, message.
Email Digest	Daily/weekly summary of income, expense, invoices.
Auto Repeat	Form menu > Repeat to create recurring documents.
Assignment Rule	Auto assign records by round robin or load balancing.

17.1 My Settings

- **Basic**: name, photo, language, time zone.
- **Email**: signature, notification frequency, email account.
- **Desk Settings**: default workspace, search bar, notification and help toggles.
- **API Access**: **Generate Keys** (secret shown once).
- **Two-Factor Authentication**: enable in System Settings, then scan the QR code with an authenticator app.
- **Theme**: Light, Dark or Automatic.

18. Troubleshooting

Problem	What to do
Not permitted / no button visible	Check role in Role Permissions Manager, User Permissions, and document status. Create buttons appear only after Submit.
Mandatory fields required	Fill every field marked with a red asterisk (also inside child rows).
Item not available in dropdown	Item may be disabled, not a Sales/Purchase item, or filtered by company. Check the Item record.
Insufficient stock	Receive stock (Stock Entry Material Receipt / Purchase Receipt / Stock Reconciliation) or allow negative stock in Stock Settings.
Cannot cancel a document	It is linked to other submitted documents. Cancel dependants first (Cancel All Documents dialog).
Invoice not showing Paid	Confirm the Payment Entry is submitted and its References row is allocated to the invoice.
Cannot post in an old period	Accounts Frozen Upto / Accounting Period blocks it. Ask the authorised role to change or use an allowed date.
Wrong number/date format	Adjust System Settings (Date Format, Number Format) or My Settings language.
Stale screen after updates	Hard refresh (Ctrl+Shift+R) or avatar menu > Reload.
Import errors	Check Data Import log, fix and use Export Errored Rows.
Emails not sent	Check Email Account (Enable Outgoing), Email Queue status, and Error Log.
Stock valuation looks wrong	Run Stock Ledger and Stock Balance reports; check backdated entries and consider Repost Item Valuation.
Mistake in a submitted document	Cancel then Amend. For stock/accounting corrections after closing use reverse entries.

19. Checklists and Best Practices

19.1 Go-live checklist

- Install and configure company, currency, fiscal year and chart of accounts
- Create warehouses, item groups, UOMs and cost centers
- Load Items, Customers, Suppliers (Data Import) and addresses/contacts
- Enter opening stock (Stock Reconciliation) and opening balances (Journal Entry, Opening Entry)
- Set tax templates, payment terms and modes of payment
- Create users, roles and user permissions
- Configure email accounts, print formats and letter head
- Configure workflows and notifications
- Train users with use cases from this document (test on a staging site first)
- Enable backups and test a restore
- Switch off developer mode and review security (HTTPS, strong passwords, 2FA)

19.2 Month-end checklist

- Submit or cancel all draft documents for the month
- Reconcile bank accounts and cash
- Review Accounts Receivable and Accounts Payable ageing
- Verify stock with Stock Balance and count exceptions
- Post depreciation and accrual journal entries
- Run payroll and post the bank entry
- Review Trial Balance, Profit and Loss and Balance Sheet
- Lock the period (Accounts Frozen Upto) and take a backup

19.3 Best practices

- Never edit core ERPNext code; use Customize Form, Workflow, Notification or a custom app.
- Use the **Create** button to keep documents linked and avoid re-typing.
- Enter transactions promptly and with the correct posting date; avoid heavy backdating of stock entries.
- Reconcile bank and review receivables/payables regularly.
- Give users the minimum roles they need and review them every quarter.
- Keep a staging site to test upgrades, imports and workflows before applying them to production.
- Schedule automatic backups and periodically test a restore.

19.4 Where to learn more

- Official user manual: https://docs.erpnext.com
- Framework documentation: https://docs.frappe.io/framework
- Community forum: https://discuss.frappe.io
- Source code: https://github.com/frappe/erpnext

Note: This document describes standard ERPNext behaviour. Your installation may contain custom fields, workflows and permissions that change what you see. Add your company-specific procedures as extra use cases.
